

Joint Article Management Promotion-consortium

Mission

Joint Article Management Promotion-consortium aims to promote sound management and information disclosure of chemical substances contained in products to contribute to ensuring international competitiveness of industries

JAMP Framework

In order to transfer information of JAMP declarable substances contained in product, JAMP propose to use standard formats, so-called **chemSHERPA-CI/chemSHERPA-AI**.
 ⇒Based on substance and preparation information coming from upstream industries, JAMP member companies disclose information of substances contained in articles.

[Note]

- SDS: Safety Data Sheet
- chemSHERPA-CI/AI: Common form (2015. 10-) of chemical substance information communication of products which Ministry of Economy, Trade and Industry has developed and promoted. JAMP has been in operation from fiscal 2016.

JAMP Guidelines

JAMP proposes the Guidelines for supply chains that summarize the requirements for communicating information of chemical substances in products by self-directive management of the substances by manufacturers.

chemSHERPA-CI/chemSHERPA-AI

| | |
|--|---|
| Chemical Manufacturers (Upstream industries) | Communicate the chemical information (substance name in the list of JAMP Declarable Substances and its content) using SDS and chemSHERPA-CI |
| Parts Manufacturers (Midstream industries) | Communicate the chemical information using chemSHERPA-AI based on the information from SDS and chemSHERPA-CI |
| Final Product Manufacturers (Downstream industries) | Manage the chemical information contained in the products based on the information from chemSHERPA-AI |

chemSHERPA Tools

- chemSHERPA Data entry support tool for chemicals
- chemSHERPA Data entry support tool for articles

Guideline for chemical management in products

- Guidelines/Guidances for the Management of Chemical Substances in Products (CiP)
- List of Action Items & Check Sheet
- Self-Declaration of Conformance (blank sheet)

JAMP appropriately manages information on chemical substances contained in products, creates a specific mechanism for smoothly disclosing and transmitting information in the supply chain, and strives to disseminate it. These activities not only improve industrial competitiveness, but also widely contribute to the sustainability of society through the reduction of social costs.

JAMP is an organization that works by the initiative of members.

In order to spread the contribution of JAMP's activities to society, We would like to have more companies participate in the activities.

Please contact the JAMP Secretariat if you are interested in JAMP and its activities.
